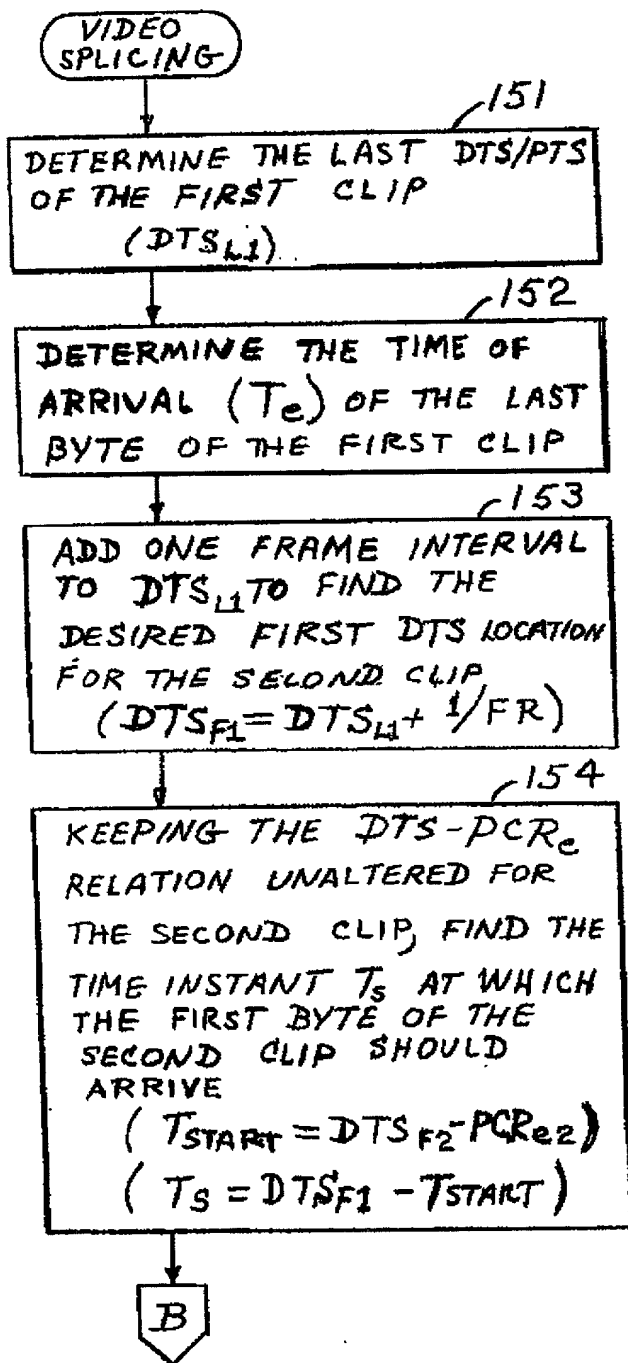

FIG. 5

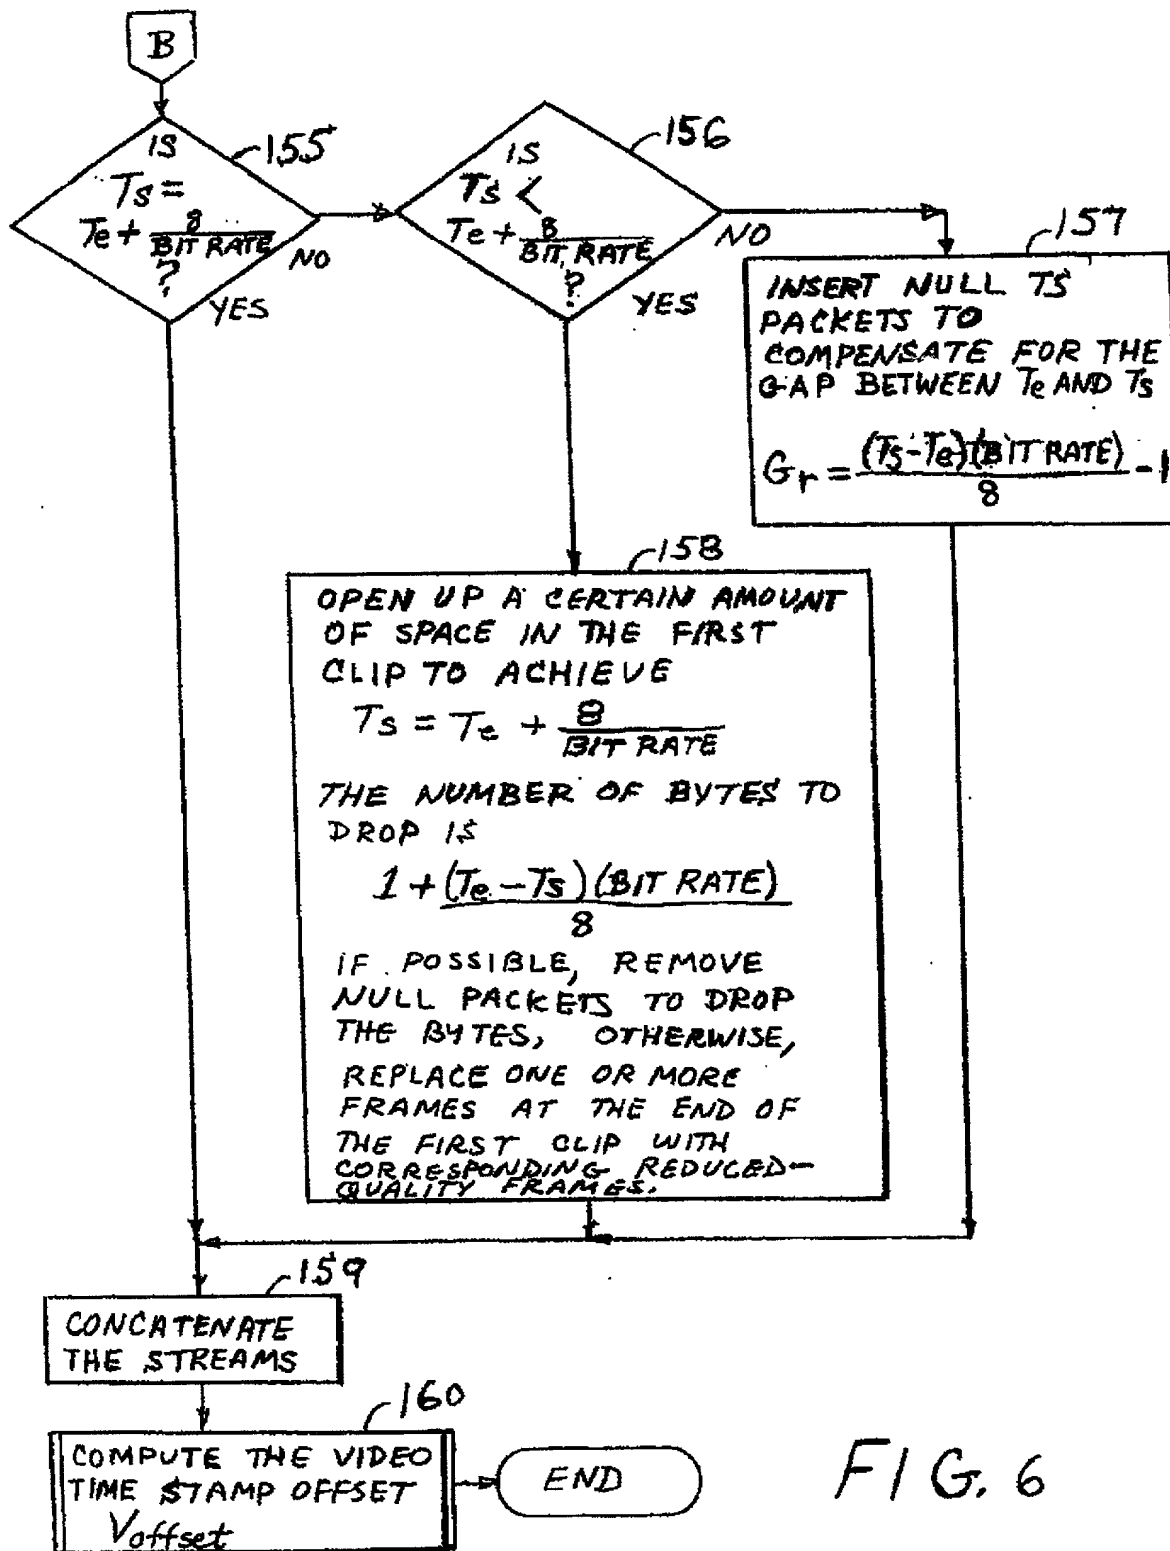

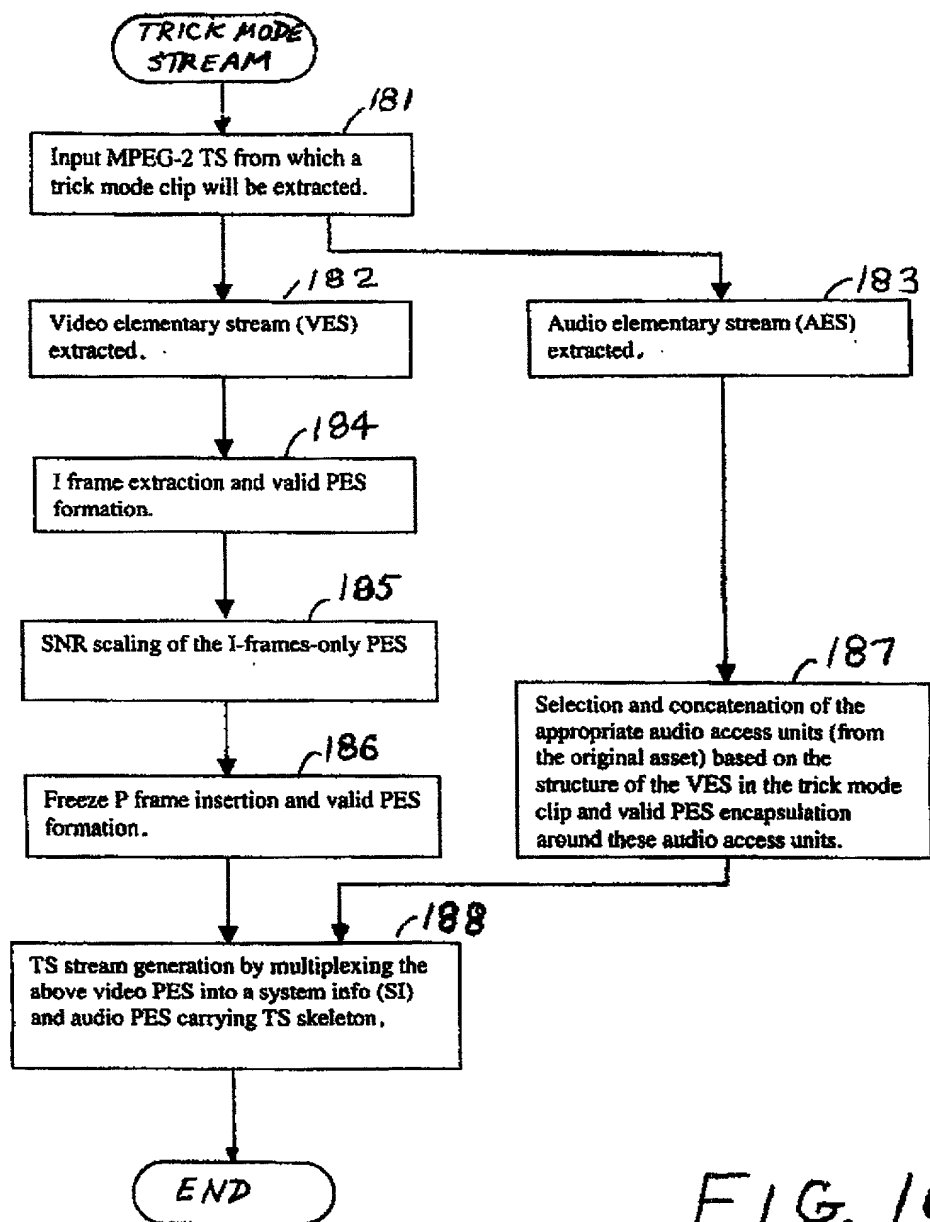

FIG. 6

The diagram illustrates a 2D discrete Fourier transform grid. The horizontal axis represents increasing horizontal frequency  $f_j(x)$ , with indices 1 through 8. The vertical axis represents increasing vertical frequency  $f_i(y)$ , with indices 1 through 8. The grid contains 64 cells, each labeled  $C_{ij}$ , where  $i$  is the vertical index and  $j$  is the horizontal index. The cells are arranged in a grid where the horizontal frequency increases from left to right and the vertical frequency increases from top to bottom. The grid is overlaid with a series of diagonal lines forming a triangular pattern, and a series of horizontal lines forming a rectangular pattern. The grid is labeled with  $f_i(y)$  on the left and  $f_j(x)$  on the right.

FIG. 3

FIG. 33

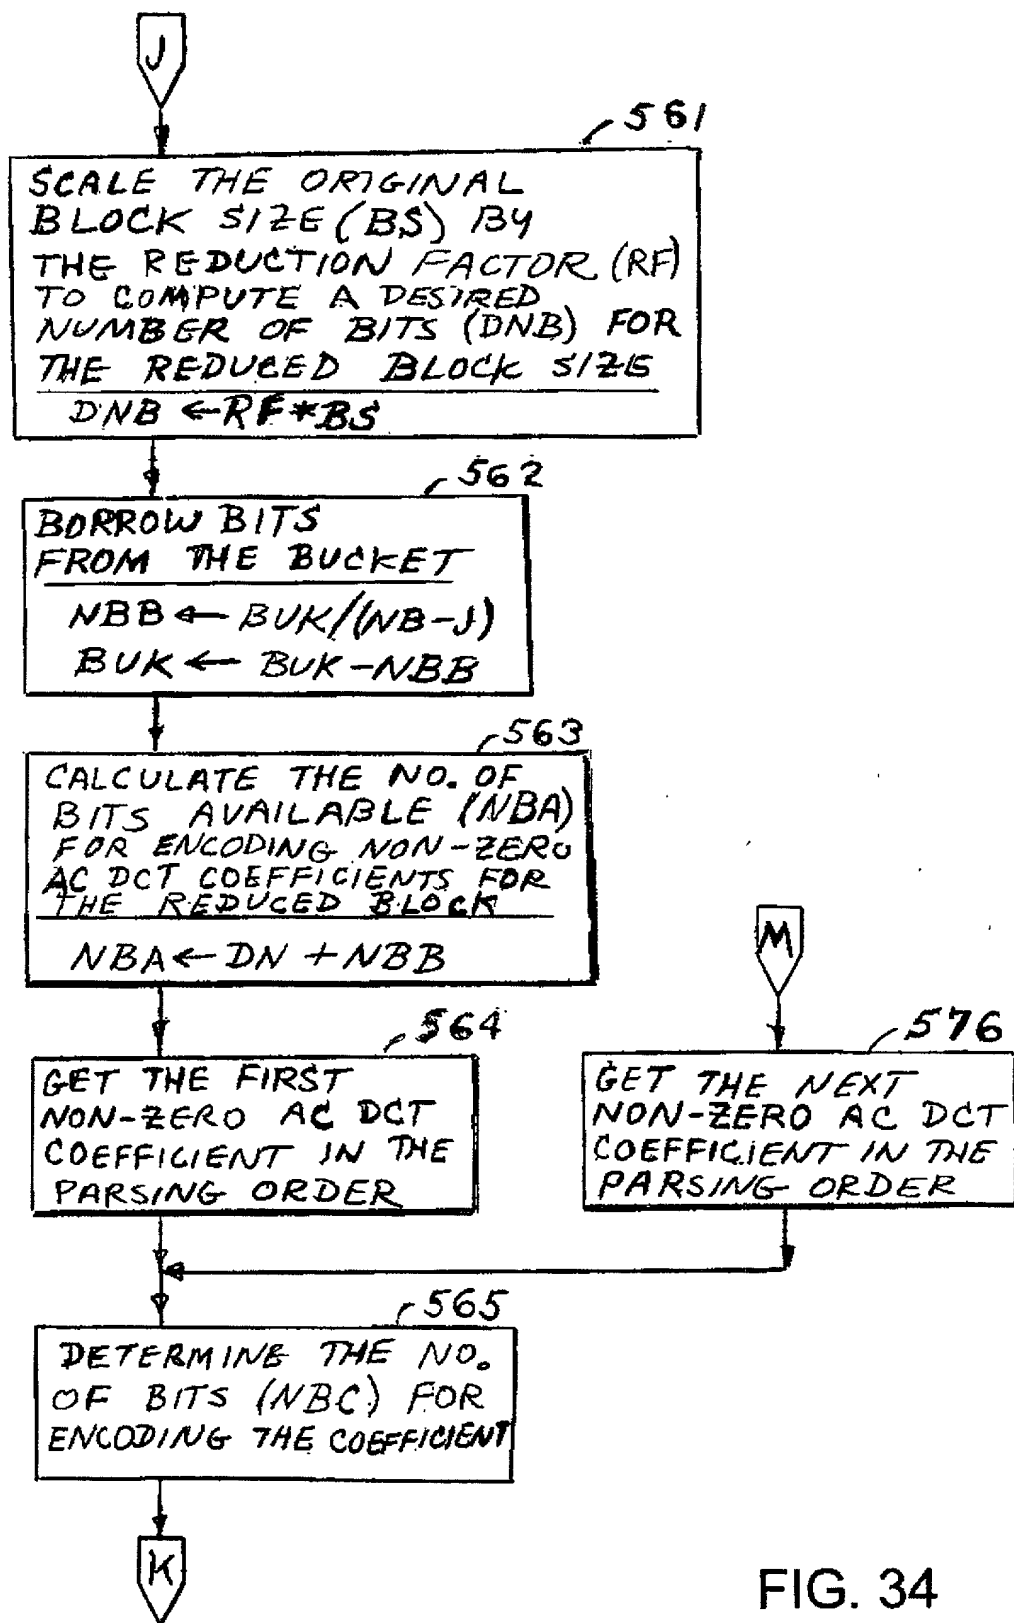

FIG. 34

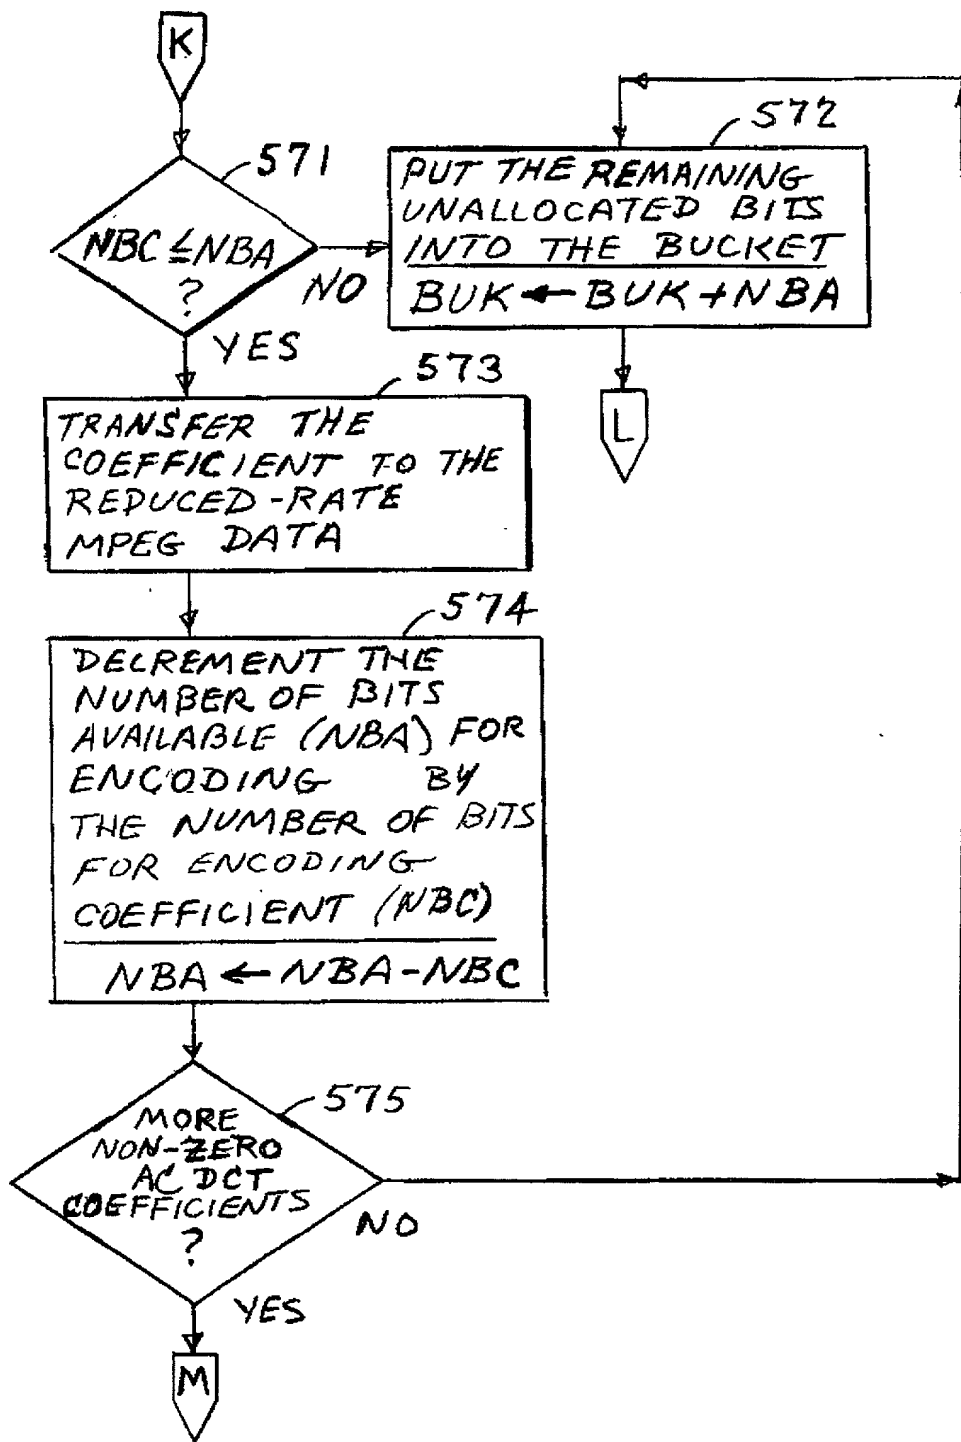

FIG. 35

DETERMINE THE COEFFICIENT BIT RATE REDUCTION FACTOR (RF) FOR A REDUCTION FROM AN MPEG SOURCE HAVING AN UNKNOWN OR VARIABLE BIT RATE

591  
DETERMINE VIDEO FRAME SIZE IN BITS (VS)

592  
DETERMINE A MOVING AVERAGE VIDEO FRAME SIZE OVER THE LAST N FRAMES (VAVS)

593  
CALCULATE A TARGET AVERAGE VIDEO FRAME SIZE (VRAVS) FROM AN ACCURACY RATE CONTROL FACTOR (AR), THE DESIRED REDUCED RATE (BR) OF THE REDUCED-QUALITY MPEG DATA, AND THE VIDEO FRAME RATE (FR)

$$VRAVS = AR * BR / FR$$

594  
DETERMINE NO. OF BITS (BS) IN THE FRAME THAT ARE NOT BITS OF THE AC DCT COEFFICIENTS

595  
COMPUTE THE COEFFICIENT BIT RATE REDUCTION FACTOR (RF)

$$RF = VRAVS / VAVS$$
